Similarity Word Problems

In this lesson, students use the properties of similar triangles to find the missing side lengths of triangles in a variety of word problems. The word problems involve shadows, mirrors ...

Topic 15 (Congruence Word Problems)

Topic 15 (Congruence Word Problems) October 24, 2014 By Ms. Bruno For this lesson we took our triangle congruence applications from the previous lesson and applied them to word problems.

SparkNotes: Geometry: Congruence: Problems

Problem : When the lengths of the sides of two triangles are the same, those triangles are congruent. Using symbols and the correct correspondence, write that the two triangles below are congruent. Using symbols and the correct correspondence, write that the two triangles below are congruent.

Problem 1 : Check whether two triangles are congruent or not.

Congruent Triangle Worksheets

If two triangles are congruent not only are the length of their sides the same, but all their angles are the same as well. Triangles will often be transformed by rotation (turning), reflection (flipping), and translation (sliding). We can prove triangles are congruent if we can find the measure of their sides and angles. We often use markings or ticks on triangles to demonstrate the congruency between sides.

Congruent Triangles Worksheets | SSS, SAS, ASA, AAS, HL

The origin of the word congruent is from the Latin word "congruere" meaning "correspond with" or "in harmony". A collection of congruent triangles worksheets on key concepts like congruent parts of congruent triangles, congruence statement, identifying the postulates, congruence in right triangles and a lot more is featured here for the ...

Use similar & congruent triangles (practice) | Khan Academy

Solve geometry problems with various polygons by using all you know about similarity and congruence.

Triangles and Congruence Worksheets

Since all 6 parts of the triangle are congruent, we can say that both triangles are exactly the same. You have to be careful when writing the congruence statement because the letters of one triangle have to match with the corresponding letters of the other triangle. For example, if we name the first triangle in our problem (ΔABC) , we have to name the other triangle (ΔDEF) by ...

Congruent Triangles (examples, solutions, videos)

We can tell whether two triangles are congruent without testing all the sides and all the angles of the two triangles. There are four rules to check for congruent triangles. They are called the SSS rule, SAS rule, ASA rule and AAS rule. There is also another rule for right triangles called the Hypotenuse Leg rule. As long as one of the rules is true, it is sufficient to prove that the two triangles are congruent.
